

**BOKOMATEN®** acts as an independent library and can be placed anywhere where you wish to provide library service 24 hours a day, 7 days a week.

The machine stores books and handles loans, returns and administration automatically. The user is identified by their ordinary library card and select books using the touch screen. The book is delivered and the loan is registered in the central library system, just like any other loan. Returns are also done in the machine.

**BOKOMATEN®** gives libraries the opportunity to provide a round the clock service, either as a complement to existing libraries or as a small, independent library in a remote location. The machine provides new opportunities as it can be placed in shopping malls, residential areas, hospitals, train stations etc.

**BOKOMATEN®** is available in two models; one wall, or window, through model and one stand alone model that is rolled into place in an indoor environment. The storage capacity is approximately 500 books depending on the size of the selection. This gives a very high capacity on a yearly basis.

**Combining access and capacity, BOKOMATEN® offers a very cost efficient solution for raising the level of service to the community. BOKOMATEN® can provide service where the traditional library can not.**

*Bokomaten can be delivered in a wide variety of colours to fit into the existing environment.*

*The image shows how books are presented on the screen. The interface has been developed together with libraries.*

#### Technical Specifications

|                   |   |
|-------------------|---|
| Storage Capacity: | Approx. 500 books (depends on selection)  |
