

a new way to borrow books
BOKOMATEN®

BOKOMATEN® is a unique concept in which the process of borrowing and returning books is completely automated.

BOKOMATEN® handles different media formats such as books, CDs and DVDs.

BOKOMATEN® can be placed in a library or as a stand alone solution.

How does it work?

The library card gives access to BOKOMATEN®

The borrower identifies himself with his normal library card or any other form of ID-card that the library may be using. He makes his choices among the titles available in the storage unit directly on the touch screen of the machine. The book is delivered through the gate in front of the machine and a receipt is printed.

Returning a book is equally simple. Identify using a valid card and return the book through the gate. A receipt is also given on return.

In order to protect the books, they are placed in plastic boxes. However, the borrower does not have to place the book in the same box it came in. **BOKOMATEN®** identifies the books through the use of RFID tags.

Through an effective use of space **BOKOMATEN®** can store large quantities of books in a very small floor area.

The books are placed where it is most suitable from a space management perspective. This means that the capacity of the machine can be optimised at all times.

Standard library cards or any other ID-card can be used.

Product description

A complement

BOKOMATEN® is a perfect complement to the traditional library structure. It gives new opportunities to provide service.

Access

BOKOMATEN® is available 24 hours a day, 365 days a year. It is accessible through the internet and it can communicate through e-mail and SMS.

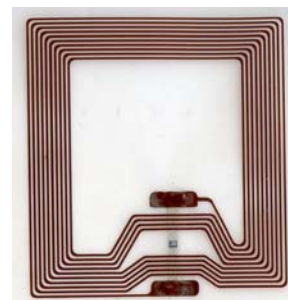

A stylish implementation at Lidingö Stadsbibliotek in Sweden.

Flexibility

BOKOMATEN® is easy to relocate. It can be expanded if need arise and booking terminals can be used to reduce queues.

Cost efficiency

BOKOMATEN® requires minimal floor space, and no personnel in its daily operation. It provides a high degree of service at a low cost.

RFID technology is a safe and efficient means of identification.

Two models – indefinite possibilities

BOKOMATEN® is available in two standard models. The capacity depends on the size of the storage unit but also on size of the books.

In addition to the standard models it is also possible to create tailor made solutions. Please contact us for additional information.

Models

Model:	Capacity*:	Floor space:
A10	Approx. 800 titles	1,9m ²
A20	Approx. 1600 titles	3,8m ²

** The capacity depends on the mix of different book sizes and the general turnover of books. The numbers in the table above represents an example of a mix of books.*
