

MEDIAMATEN® has been developed in response to the needs libraries to automate the handling of CDs and DVDs.

After the machine has been loaded with discs it automatically handles the entire process of lending and accepting returns. There is no risk of theft as the discs are protected by the machine at all times. The user is identified with the ordinary library card and makes selections on the touch screen. The disc is delivered and the transaction is registered in the library system. Returns are made the same way, to the machine.

MEDIAMATEN® is normally placed inside the library to free staff resources. It is also possible to place the machine at other locations where you would like to offer this service, such as malls, schools and communication centres.

MEDIAMATEN® is available in different models with a storage capacity of up to 2 700 discs. This enables a capacity of 60 000 loans per year. It is possible to charge for loans and collect payment through credit card or by a prepaid solution.

By freeing resources, **MEDIAMATEN®** quickly pays for itself.

Mediamaten occupies very little floor space and is available in many different colours. The picture shows the model C8, storing 2000 discs..

Technical Specifications

Storage Capacity:	Model C7 – 1000 discs Model C8 – 2000 discs Model C10 – 2700 discs
Installation:	Stand alone or build through wall or window.
Size:	Floor Space: 39.4 in ² 118.1 in ² (1 – 3 m ²) Height: 81.5 in (207 cm) Weight: 990 Lbs (450 Kgs)
Connections:	110V power and network connection
Power Usage:	Max 500W
